No. T.11013/02/2018-AR&D

To,

1. Drugs Controller General (India)
2. CDSCO Zonal Offices
3. All State Drug Controllers
4. Members of Scientific Body of the IPC
5. Members of Sub-Committees of Scientific Body of the IPC
6. Directors of Drugs Testing Laboratories
7. Government Analysts
8. IDMA/OPPI/BDMA/FSSAI/Small Scale Industry Associations

Subject: Amendment List-05 to IP 2018

The 8th Edition of Indian Pharmacopoeia (IP) 2018 has become effective from 1st January, 2018. Based on scientific inputs, some IP monographs needed up-gradation and accordingly Amendment List - 05 to IP 2018 is issued containing such amendments.

This is for notice and compliance with IP 2018.

(Dr. Jai Prakash)
Secretary-cum-Scientific Director (I/c)

Encl. Amendment List-05 to IP 2018
Amendment List 05 to IP-2018

**Allopurinol.** Page 1176
Heavy metals
Change to: Heavy metals (2.3.13). 1.0 g complies with the limit test for heavy metals, Method B (20 ppm).

**Bisacodyl Gastro-resistant Tablets.** Page 4419
Dissolution A. After chromatographic system, line 2
Change from: Calculate the content of C_26H_31NO_4 in the medium.
   to: Calculate the content of C_26H_31NO_4.

Complies with the acceptance criteria given under acid stage.

**Calcium Gluconate.** Page 1458
Dose. Line 3
Change from: 2.5mmol
   to: 2.5mEq

**Calcium Gluconate Injection.** Page 1459
Usual strengths. Line 4
Change from: 0.45mmol
   to: 0.45mEq

**Citicoline Injection.** Page 1639
Para 2
Change to: Cicitoline Injection contains Cicitoline Sodium equivalent to not less than 90.0 per cent and not more than 110.0 per cent of the stated amount of cicitoline, C_14H_23N_5O_11P_2.

Assay. Last line
Change from: C_14H_23N_5O_11P_2
   to: C_14H_23N_5O_11P_2

**Citicoline Prolonged-release Tablets.** Page 1639
Para 2
Change to: Cicitoline Prolonged-release Tablets contain Cicitoline Sodium equivalent to not less than 90.0 per cent and not more than 110.0 per cent of the stated amount of cicitoline, C_14H_23N_5O_11P_2.

Assay. Last line
Change from: C_14H_23N_5O_11P_2
   to: C_14H_23N_5O_11P_2

**Citicoline Tablets.** Page 1641
Para 2
Change to: Cicitoline Tablets contain Cicitoline Sodium equivalent to not less than 90.0 per cent and not more than 110.0 per cent of the stated amount of cicitoline, C_14H_23N_5O_11P_2.

Assay. Last line
Change from: C_14H_23N_5O_11P_2
   to: C_14H_23N_5O_11P_2

**Ipratropium Bromide.** Page 2305
Para 2, line 2
Change from: C_26H_30BrNO_3, H_2O
   to: C_26H_30BrNO_3.
Water
Change from: Not more than 5.0 per cent, determined on 0.5 g.
to: 3.9 per cent to 4.4 per cent, determined on 0.5 g.

Kanamycin Injection. Page 2347
A. Kanamycin Injection (Solution). Para 1
Change to: Kanamycin Injection contains Kanamycin Sulphate equivalent to not less than 97.0 per cent and not more than 110.0 per cent of the stated number of Units of kanamycin.

Insert before Bacterial endotoxins
Other tests. Comply with the tests stated under Parenteral Preparations (Injections).

Lamivudine and Zidovudine Tablets. Page 2381
Related substances
Change to: Related substances. Determine by liquid chromatography (2.4.14).

Solvent mixture. 95 volumes of mobile phase A and 5 volumes of mobile phase B.

Test solution. Disperse a quantity of the powdered tablets containing 150 mg of Lamivudine in water with the aid of ultrasound for 15 minutes and dilute to 100.0 ml with water, filter. Dilute 1.0 ml of the filtrate to 10.0 ml with the solvent mixture.

Reference solution (a). A solution containing 0.015 per cent w/v of lamivudine RS and 0.03 per cent w/v of zidovudine RS in the solvent mixture.
Reference solution (b). A 0.017 per cent w/v solution of lamivudine resolution mixture B RS in the solvent mixture.

Chromatographic system
- a stainless steel column 25 cm x 4.6 mm, packed with octadecylsilane bonded to porous silica (5 µm) (Such as Inertsil ODS-3v),
- mobile phase: A. a buffer solution prepared by dissolving 1.95 g of ammonium acetate in 900 ml of water, adjusted to pH 4.0 with glacial acetic acid and dilute to 1000.0 ml with water,
B. methanol,
C. acetonitrile,
- flow rate: 1 ml per minute,
- a gradient programme using the conditions given below,
- spectrophotometer set at 270 nm,
- injection volume: 10 µl.

(The limit includes other impurities)

1-4-Aminopyrimidin-2(1H)-one,
2-Pyrimidine-2,4(1H,3H)-dione,
3-1-(2R,3S,5S)-2-(1-hydroxymethyl)-1,3-oxathiolan-5-yl)cytosine S-oxide,
4-1-(2R,3S,5S)-2-(4-hydroxymethyl)-1,3-oxathiolan-5-yl)cytosine S-oxide,
5-Methyl-1-pyrimidine-2,4(1H,3H)-dione,
6-1-(2S,3S)-2-(1-hydroxymethyl)-1,3-oxathiolan-5-yl)cytosine,
7-1-((2-Deoxy-β-D-ribofuranosyl)thymine,
8-2-(2R,5R)-2-(1-hydroxymethyl)-1,3-oxathiolan-5-yl)uracil,
9-2-Hydroxybenzoic acid,
10-3-Chloro-7-deoxythymidine.

These are the process related impurities, monitored during the drug substance.

The relative retention time for lamivudine diastereomer and lamivudine are 0.5 and 0.52 respectively.

Inject reference solution (a) and (b). The test is not valid unless the resolution between lamivudine diastereomer and lamivudine peaks is not less than 1.5 in the chromatogram obtained with reference solution (b) and the relative standard deviation of replicate injections is not more than 2.0 per cent for each component in the chromatogram obtained with reference solution (a).

Inject reference solution (a) and the test solution.

Calculate the percentage of each lamivudine related impurity in the portion of tablets taken:

\[ \text{Result} = \left( \frac{r_f}{r_i} \right) \times 100 \]

where
\[ r_f = \text{peak response of each lamivudine related impurity from the test solution} \]
\[ r_i = \text{sum of the peak responses of lamivudine and all lamivudine related impurities from the test solution} \]

Calculate the percentage of each zidovudine related impurity and other impurity in the portion of tablets taken:

\[ \text{Result} = \left( \frac{r_f}{r_i} \right) \times (c) \times 100 \]

where
\[ r_f = \text{peak response of each zidovudine related impurity and other secondary impurity from the test solution} \]
\[ r_i = \text{sum of the peak responses of zidovudine, all zidovudine related impurities and other impurities from the test solution} \]
\[ c = \text{correction factor} \]

**Lithium Carbonate. Page 2449**

**Potassium**

*Change from:* Dissolve 1.0 g in 10 ml of 7 M hydrochloric acid, add sufficient water to produce 50 ml and determine by flame photometry (2.4.4), measuring at 766.5 nm, using potassium solution FP, suitably diluted with water, to prepare the standard solutions (500 ppm).

*To:* Dissolve 1.0 g in 10 ml of 7 M hydrochloric acid, add sufficient water to produce 50 ml and determine by Method A of flame photometry (2.4.4) or by Method A for Atomic absorption spectrophotometry (2.4.2), measuring at 767 nm, using potassium solution FP or potassium solution AAS respectively, suitably diluted with water, to prepare the standard solutions (500 ppm).
Sodium
Change from: Dissolve 1.0 g in 10 ml of 7 M hydrochloric acid, add sufficient water to produce 50 ml and determine by flame photometry (2.4.4), measuring at 589 um, using sodium solution FP, suitably diluted with water, to prepare the standard solutions (500 ppm).

to: Dissolve 1.0 g in 10 ml of 7 M hydrochloric acid, add sufficient water to produce 50 ml and determine by Method A for flame photometry (2.4.4) or by Method A for atomic absorption spectrophotometry (2.4.2), measuring at 589 nm, using sodium solution FP or sodium solution AAS respectively, suitably diluted with water, to prepare the standard solutions (500 ppm).

Malic Acid. Page 2493
Specific optical rotation. Line 1
Change from: Specific optical rotation
to: Optical rotation

Nortriptyline Tablets. Page 2755
Uniformity of content. Last line
Change from: C_{13}H_{21}N

to: C_{13}H_{21}N

Insert after Storage
Labelling. The label states the strength in terms of equivalent amount of nortriptyline.

Nystatin. Page 2759
Composition. Last para, line 7
Insert after reference solution (a).

Ignore any peak with an area less than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.1 per cent).

Abnormal toxicity
Delete the following requirement

Nystatin intended for oral administration complies with the following additional requirements.
Abnormal toxicity (2.2.1). Complies with the test for abnormal toxicity, using a quantity containing not less than 600 Units suspended in not more than 0.5 ml of a 0.5 per cent w/v solution of acaci and injecting the suspension intraperitoneally.

Ormeloxifene Hydrochloride Tablets. Page 2795
Identification. C
Change to: C. In the Assay, the principal peak in the chromatogram obtained with the test solution corresponds to peak in the chromatogram obtained with the reference solution.

Pantoprazole Gastro-resistant and Domperidone Prolonged-release Capsules. Page 2850
Dissolution
For Pantoprazole Sodium. A. After chromatographic system, line 6
Change From: Calculate the content of C_{10}H_{13}F_{2}N_{7}O_{6}S.
to: Calculate the content of C_{10}H_{13}F_{2}N_{7}O_{6}S released in the acid medium by subtracting the content of C_{10}H_{13}F_{2}N_{7}O_{6}S in the test solution from the total content of Pantoprazole, C_{10}H_{13}F_{2}N_{7}O_{6}S determined in the Assay.

Polyvinyl Alcohol. Page 2960
Insert at the end
Labelling. The label states (1) viscosity in terms of mPas (2) ester value.
Prednisolone Tablets. Page 2980

Assay

Reference solution (b)

Change to: Reference solution (b). A 0.005 per cent w/v solution of prednisolone RS in a mixture of 58 volumes of methanol and 42 volumes of water.

Raloxifene Hydrochloride. Page 3085

Assay. After chromatographic system, para 1

Change to: Inject reference solution (a) and (b). The test is not valid unless the resolution between the raloxifene-N-oxide and principal peak is not less than 2.0 in the chromatogram obtained with reference solution (b), the tailing factor is not more than 2.0 and the relative standard deviation for replicate injections is not more than 0.7 per cent in the chromatogram obtained with reference solution (a).

Raloxifene Hydrochloride Tablets. Page 3087

Dissolution. After chromatographic system, line 2

Change from: tablet.

to: medium.

Assay. After chromatographic system, para 1

Change to: Inject reference solution (a) and (b). The test is not valid unless the resolution between the raloxifene-N-oxide and principal peak is not less than 2.0 in the chromatogram obtained with reference solution (a), the tailing factor is not more than 2.0 and the relative standard deviation for replicate injections is not more than 2.0 per cent in the chromatogram obtained with reference solution (b).

Ropinirole Prolonged-release Tablets. Page 4501

Related substances. After chromatographic system, para 1, line 5 and 6

Change from: not more than 10.0 per cent for ropinirole impurity B in the chromatogram

to: not more than 10.0 per cent in the chromatogram

Streptomycin Sulphate. Page 3265

Para 2.

Change to: Streptomycin Sulphate has a potency equivalent to not less than 720 µg of streptomycin per mg, calculated on the dried basis.

Sulbactam Sodium. Page 4513

Related substances

Change to: Related substances. Determine by liquid chromatography (2.4.14).

Buffer solution. A 0.27 per cent w/v solution of monobasic potassium phosphate, adjusted to pH 4.0 with orthophosphoric acid.

Solvent mixture. 98 volumes of the buffer solution and 2 volumes of acetonitrile.

Test solution. Dissolve 77 mg of the substance under examination in 2 ml of acetonitrile and dilute to 100.0 ml with the buffer solution.

Reference solution (a). Dissolve 70 mg of sulbactam RS in 2 ml of acetonitrile and dilute to 100.0 ml with the buffer solution.
Reference solution (b). Dilute 1.0 ml of reference solution (a) to 100.0 ml with the solvent mixture. Dilute 1.0 ml of the solution to 10.0 ml with the solvent mixture.

Reference solution (c). A solution containing 0.007 per cent w/v each of sulbactam related substance A RS, sulbactam related substance D RS, sulbactam related substance E RS and sulbactam related substance F RS in acetonitrile. Dilute 1.0 ml of the solution to 100.0 ml with the solvent mixture (NOTE: Protect the solution from light).

Chromatographic system
- a stainless steel column 15 cm x 4.0 mm, packed with octadecylsilane bonded to porous silica (3 µm),
- column temperature: 40°C,
- mobile phase: A, a 0.54 per cent w/v solution of monobasic potassium phosphate, adjusted to pH 4.0 with orthophosphoric acid,
  B, acetonitrile,
- a gradient programme using the conditions given below,
- flow rate: 1 ml per minute,
- spectrophotometer set at 215 nm,
- injection volume: 20 µl.
