Tests
Delete:
Abnormal toxicity (2.2.1). Complies with the test for abnormal toxicity.

Diphtheria, Tetanus and Pertussis Vaccine (Adsorbed) Page 3602

FINAL LOT
Tests
Delete:
Abnormal toxicity (2.2.1). Each final lot shall be tested for abnormal toxicity by injecting intraperitoneally one human dose, but not more than 0.25 ml into each of the five mice weighing between 17 to 22 g and at least one human dose but not more than 1.0 ml into each of the two guinea-pigs weighing between 250 and 350 g. The preparation passes the test if none of the animals dies or shows signs of ill health in 7 days following the injection. If one of the animal dies or shows the sign of ill health, repeat the test. The preparation passes the test if none of the animals in the second group dies or shows signs of ill health in the time interval specified.

Diphtheria, Tetanus and Pertussis (Whole Cell), Hepatitis B (rDNA) and Haemophilus influenza Type b Conjugate Vaccine (Adsorbed) Page 3604
